General Information

Short summary

A Swedish design company based in Östergötland has developed a stainless steel manual whisk for household food preparation. The company seeks an experienced EU-based manufacturer to produce 10,000 units under a manufacturing agreement, ensuring consistent quality and competitive production costs.

Full description

A small Swedish company located in Östergötland, active in product design and applied art, has developed an innovative manual kitchen whisk made entirely of stainless steel. The product is a cordless, hand-operated food mixing tool intended for everyday household use.

The whisk is designed in one standard size and manufactured exclusively from stainless steel to ensure durability, corrosion resistance, and long service life. The product combines functional kitchen utility with aesthetic design characteristics. The design is protected as applied art with copyright protection valid for 70 years.

The company has completed the design phase and is ready to initiate series production. An initial production volume of approximately 10,000 pieces is planned. To move forward, the company is seeking a reliable and experienced manufacturing partner within the European Union.

The selected cooperation type is a Manufacturing agreement. The Swedish company will retain ownership of the design and product concept, while the manufacturing partner will be responsible for industrial production according to agreed specifications. The objective is to establish a stable, long-term production partnership ensuring consistent quality standards and competitive unit costs.

International cooperation is envisaged as follows:

The Swedish company will provide full design documentation and technical drawings.

The manufacturing partner will produce the whisk in stainless steel according to defined material and finishing requirements.

Production quality, packaging requirements, and delivery timelines will be agreed contractually.

The company is particularly interested in manufacturers located within the European Union to ensure regulatory compliance, shorter logistics chains, and efficient communication.

Advantages and innovations

Made entirely from stainless steel, ensuring high durability and corrosion resistance compared to plastic-based alternatives.

Single-material construction simplifies cleaning and improves hygiene in food preparation.

Cordless and manual operation eliminates the need for electricity or batteries.

Designed as applied art, combining functionality with aesthetic value.

Simple, robust construction suitable for cost-efficient series production of 10,000 units or more.

Technical specification or expertise sought

The company seeks a manufacturer with:

Experience in stainless steel forming and processing (cutting, bending, welding, polishing).

Capability to manufacture kitchen utensils in medium-scale series (minimum 10,000 units).

Quality control procedures ensuring consistent surface finish and dimensional accuracy.

Compliance with EU food-contact material regulations.

Ability to offer competitive unit pricing for series production.

Partner Sought

Expected role of the partner

Under a manufacturing agreement, the partner will:

Produce the stainless steel whisk according to provided technical documentation.

Source certified stainless steel suitable for food-contact applications.

Carry out forming, assembly, and surface finishing processes.

Implement quality assurance and batch control procedures.

Deliver agreed quantities within defined timelines.

The partner should be an established manufacturer of metal kitchen utensils or similar consumer goods with documented production experience.
