General Information

Short summary

The company is looking for reliable European partners with experience in fabric manufacturing, digital fabric printing and the supply of functional fabrics for home textile products. It is interested in durable decorative fabrics for new collections as well as unquilted microfiber fabric for inner cushion casings.

The aim is to establish a trusting, long term cooperation with partners who value quality, continuity, transparent communication and reliable delivery processes.

Full description

A German company specializing in high-quality home textiles is looking for reliable European partners in the field of fabric production, digital fabric printing and the supply of functional fabrics for home textile products.

The company's focus is particularly on its popular "Leseknochen", ergonomically shaped cushions that combine comfort, functionality and decorative design. The products are used as neck pillows, reading supports, back cushions or support pillows and are made from carefully selected materials.

The company is interested in two different types of fabric supply:

1. Decorative outer fabrics for new collections

The company is looking for durable decorative fabrics suitable for home textile products and, ideally, digital fabric printing. Requirements include a minimum grammage of approx. 200 g/m², order quantities from approx. 50 meters per design, a fabric width of approx. 140 cm or wider, and materials such as linen look fabrics, wide corduroy, canvas or woven structural fabrics.

2. Unquilted microfiber fabric for inner pillow casings

In addition, the company is looking for unquilted white microfiber fabric for inner cushion casings. The fabric will be sewn into inner casings and filled mechanically with loose polyester hollow fibre using a filling machine.

The required microfiber fabric should be made of 100 percent polyester, unquilted, unpadding, uncoated and non-elastic or only minimally elastic. The target grammage is approx. 85 g/m², with an acceptable range of approx. 80 to 110 g/m². The preferred width is 160 cm, minimum 150 cm. The fabric should be soft, smooth, wrinkle resistant, suitable for industrial sewing and dense enough to reduce fibre migration after filling. OEKO TEX STANDARD 100 or a comparable textile certification is preferred.

Reliable and timely deliveries to the company's production partner in Poland are required. The company is interested in samples first in order to test sewing behaviour, suitability for machine filling, washing behaviour and overall quality. If the material is suitable, regular follow up orders and a long-term cooperation are intended.

The company attaches great importance to honest and professional communication, transparent technical information, reliable delivery times and efficient cooperation.

Advantages and innovations

The “Leseknochen” combines comfort, functionality and decorative design. Thanks to its ergonomic shape, it can be used in various ways: as a neck pillow for relaxed lying, as a reading support, as a back cushion on a sofa or bed, or as a support pillow when lying on the stomach.

This multifunctionality makes the product an attractive home textile accessory for customers who value relaxation, comfort and well-designed everyday products. The use of high quality and durable fabrics is an important part of the product concept, as the cushions are designed for regular use and long-lasting customer satisfaction.

The company sells its products to wholesale, retail and B2C customers in several European countries and is therefore interested in reliable fabric partners who can support consistent quality and long-term product availability.

Technical specification or expertise sought

The partner should have experience in the production, supply or digital printing of fabrics for home textile products. For decorative outer fabrics, the partner should be able to supply durable fabrics such as linen look fabrics, wide corduroy, canvas, woven structural fabrics or comparable materials. Experience with digital fabric printing, custom designs and repeatable production quality is welcome.

For inner cushion casings, the partner should be able to supply unquilted white microfiber fabric made of 100 percent polyester. The fabric should be suitable for industrial sewing and machine filling with loose polyester hollow fibre. The target grammage is approx. 85 g/m², with an acceptable range of approx. 80 to 110 g/m². The preferred width is 160 cm, minimum 150 cm.

The partner should be able to provide samples, technical data sheets and information on material composition, grammage, width, washability, roll length, minimum order quantities and available certifications. OEKO TEX STANDARD 100 or a comparable textile certification is preferred.

Reliable communication, consistent quality, long term availability and timely delivery to the company's production partner in Poland are important.

Partner Sought

Expected role of the partner

The ideal partner is an experienced fabric manufacturer, fabric supplier or textile printing company that can provide high quality materials for home textile products.

For decorative outer fabrics, the partner should be able to supply durable materials such as linen look fabrics, wide corduroy, canvas, woven structural fabrics or comparable fabrics. Experience in digital fabric printing and the production of custom designs would be an advantage.

For inner cushion casings, the partner should be able to supply unquilted white microfiber fabric made of 100 percent polyester. The fabric should be suitable for industrial sewing and machine filling with loose polyester hollow fibre. It should be available in consistent quality and suitable for regular follow up orders.

The partner should be able to provide samples, technical data sheets, information on material composition, grammage, fabric width, minimum order quantities, delivery times and available certifications. OEKO TEX STANDARD 100 or a comparable textile certification is preferred.

Reliable communication, transparent pricing, timely delivery and the ability to ship to the company's production partner in Poland are essential. The company is looking for a long-term cooperation based on trust, consistency and professional communication.
