General Information

Short summary

The Belgian company active in sustainable textile and apparel design is seeking experienced textile manufacturers to digitize, grade and create samples of its unisex clothing designs. The company is looking for partners able to produce small production runs using natural wool, hemp and pure cotton fabrics free from plastic fibres, under manufacturing or supplier agreements, while ensuring high-quality craftsmanship.

Full description

The Belgian company operates in the sustainable clothing and apparel sector, specializing in the design and development of timeless woven garments for men and women. Its collections focus on unisex designs, combining functional cuts, comfort, durability and careful craftsmanship.

The company develops its designs and patterns in-house, including initial prototypes. Its garments are made using natural materials such as wool, hemp and pure cotton, with a strong preference for fabrics free from plastic fibres. Particular attention is paid to material traceability, fabric quality, durable construction and the use of responsible production methods. The garments are designed for everyday wear and long-term use rather than short-lived fashion trends.

To support the development of its collections and increase production capacity, the Belgian company seeks experienced textile and clothing manufacturers in Germany, Poland, Lithuania, Portugal, France and Italy. The objective is to establish long-term manufacturing partnerships with producers who share its commitment to sustainability, quality and craftsmanship. Experience in working with independent designers, premium clothing labels or luxury fashion houses would be an advantage.

The envisaged cooperation would involve translating the company's existing designs and patterns into finished garments, including technical preparation, pattern digitization and grading where required, sampling, and small production runs. Partners should be able to work with the specified natural fabrics, advise on manufacturing feasibility and finishing, and maintain consistent quality throughout the production process. The ability to accommodate relatively small initial orders while allowing production volumes to increase as demand grows is essential.

A manufacturing agreement is the preferred form of cooperation, with a supplier agreement also considered where appropriate. This approach would allow the company to build reliable production relationships, safeguard the quality and material standards of its collections, and gradually scale its operations. International partners are expected to contribute their technical expertise, production capabilities and craftsmanship while respecting the company's design specifications and sustainability principles.

Advantages and innovations

The company combines in-house design and prototyping with a focus on timeless unisex clothing made from natural fibres, including wool, hemp and pure cotton, without plastic fibres. Its approach prioritizes durability, responsible material sourcing and quality craftsmanship, offering manufacturers an opportunity to develop long-term partnerships for small production runs and scalable growth.

Technical specification or expertise sought

The Belgian company is looking for a manufacturing partner with proven expertise in woven garments and the technical capacity to support small production runs and future increases in production volumes.

The partner must be able to work with paper patterns and digitize and grade them according to the company's sizing specifications. Experience in garment sampling, pattern development and accurate size grading is required.
The partner should be able to work with natural fibres, including wool, hemp and pure cotton, and should be open to discussing the use of recycled polyester yarns where appropriate. The company prioritizes fabrics and garment components free from plastic fibres.

The ability to produce different types of buttonholes, including eyelet and straight buttonholes, is mandatory. Consistent quality, precise finishing and attention to detail are essential.
Sustainability is an important selection criterion. Certifications or documented evidence of renewable energy use, recycling practices and other environmentally responsible manufacturing processes are considered a significant advantage. The partner must also allow regular visits to the production site to facilitate quality control, monitor production processes and maintain a transparent, long-term working relationship

Partner Sought

Expected role of the partner

The Belgian company is seeking an experienced textile and clothing manufacturer in Germany, Poland, Lithuania, Portugal, France and Italy to establish a long-term production partnership.

The partner is expected to:
- Pattern preparation: Work with existing paper patterns and digitise and grade them according to the company's sizing specifications.
- Sampling and product development: Produce garment samples and prototypes based on the company's designs, ensuring accurate fit, construction and finishing before production.
- Garment manufacturing: Manufacture woven unisex garments for men and women using natural materials such as wool, hemp and pure cotton, with a preference for fabrics free from plastic fibres.
- Technical expertise: Demonstrate proven experience in woven garment production and the ability to create both straight and eyelet buttonholes.
- Production capacity: Accommodate small initial production runs while offering the flexibility to increase volumes as the company's business grows.
- Quality control: Maintain consistent standards for stitching, garment construction, sizing and finishing throughout sampling and production.
- Sustainable manufacturing: Where possible, demonstrate environmentally responsible production practices, supported by relevant certifications or documentation relating to renewable energy use and recycling.
- Communication and transparency: Allow regular visits to the production site to review manufacturing processes, monitor quality and discuss product development directly.

Expected outcome

The objective is to establish a lasting manufacturing or supplier agreement with a partner capable of translating the company's designs into high-quality finished garments. The partnership should provide the technical expertise, production flexibility and transparency needed to develop the collections sustainably and increase production volumes over time.
