General Information

Short summary

A Danish company specialising in naturally dyed children's clothing made from linen is seeking a manufacturer of plant-dyed knitted garments made from wool or other natural animal fibres. The company aims to expand its product range with seasonless children's apparel and is looking for a supplier agreement with an experienced manufacturing partner.

Full description

A Danish company designs and markets children's clothing made from naturally dyed linen, with a strong commitment to eliminating plastics, synthetic fibres and chemical dyes from its products. To expand its product range, the company is seeking an experienced manufacturer capable of producing knitted garments made from merino wool or other natural animal fibres, such as alpaca or wool-silk blends.

The requested products include baby and children's bodysuits, blouses and leggings made from stretch knitted fabrics. Garments should be available in sizes from approximately 60 cm to 110 cm.

A key requirement is expertise in plant-based dyeing techniques. The manufacturer should be able to produce plant-dyed garments, possibly garment-dyed and create handcrafted tie-dye patterns using natural dyes.

The company develops long-lasting products rather than seasonal collections. It intends to establish a long-term international partnership to broaden its range of naturally dyed garments while maintaining its environmental principles. Product development will be carried out jointly. The company will provide prototypes, patterns and technical documentation, while the manufacturing partner contributes its expertise in sewing, material sourcing and natural dyeing processes.

A supplier agreement has been selected because the company is looking for a manufacturing partner capable of producing finished garments for commercial sale while supporting the development of new products based on the company's specifications. Certification is not a prerequisite, provided the partner can demonstrate solid experience with natural fibres and plant-based dyeing techniques.

Advantages and innovations

The company is seeking a manufacturer with documented experience in producing garments from knitted natural animal fibres.

The partner should be able to:

* produce stretch knitted garments for babies and children;
* use exclusively plant-based dyes without synthetic dyes or chemical colouring agents;
* create handcrafted tie-dye patterns using natural dyes;
* work with natural fibres only, without synthetic fibre content (including trims);
* manufacture small production runs with a preferred minimum order quantity below 100 pieces per design;
* produce garments in children's sizes from approximately 60 cm to 110 cm.

Experience with traditional or artisan production methods is considered an advantage.

Technical specification or expertise sought

The company is seeking a manufacturer with documented experience in producing garments from knitted natural animal fibres.

The partner should be able to:

* produce stretch knitted garments for babies and children;
* use exclusively plant-based dyes without synthetic dyes or chemical colouring agents;
* create handcrafted tie-dye patterns using natural dyes;
* work with natural fibres only, without synthetic fibre content (including trims);
* manufacture small production runs with a preferred minimum order quantity below 100 pieces per design;
* produce garments in children's sizes from approximately 60 cm to 110 cm.

Experience with traditional or artisan production methods is considered an advantage.

Partner Sought

Expected role of the partner

The company is seeking a manufacturer under a supplier agreement.

The partner should specialise in manufacturing knitted garments from natural fibres and possess practical expertise in plant-based dyeing. Experience in producing children's clothing is an advantage, although proven competence in natural dyeing and knitted garments is considered more important.

The manufacturer is expected to produce finished garments based on prototypes, patterns and technical documentation supplied by the company. The partner should also contribute technical knowledge during product development, particularly regarding materials, knitting techniques, garment construction and plant-based dyeing processes.

Production may be carried out within the partner's own facilities or through an established network of specialised subcontractors, provided consistent quality and traceability can be maintained. The objective is to establish a long-term partnership supporting the continued development and manufacture of durable, naturally dyed children's clothing.
